

CONTROL CONCEPTS, INC.

Programming

Programming is the heart of an effective A/V system. Without a well-written program, all that remains is an idle collection of expensive equipment.

Absolute Control...

Control Concepts, Inc. has developed standards that guarantee the user absolute control with consistency and reliability. Our programming and interface design services provide a single point of control that is easy for anyone to operate.

Invisible Technology...

Control System Programming is a constantly and rapidly changing science. It requires discipline and attention to keep up with the latest innovations in the field. Proper hardware selection, control methodology, and functionality can make the difference between an average and an extraordinary system.

At Control Concepts, Inc., we recognize the evolving nature of the control system technology by ensuring that our programmers take full advantage of industry opportunities for advanced training and certification. As new developments in hardware, software, and information technology become available, we investigate how they can best serve our clients' needs. The result is the most up-to-date and personalized product the industry has to offer.

Advantages to working with Control Concepts'...

- Well thought-out programming approach
- We sell expertise; programming is how it is packaged
- Scalable model
- Consistency
- Standards based
- We follow industry Best Practices

You will receive...

- Initial Consultation: Your project's scope is established and used to define system functionality and the interface design.
- Control Functionality Specification: A button-by-button, screen-by-screen blueprint of your interface and functionality, the CFS governs the construction of your system and aids in the development of the system's scope and feel.
- Staging: To streamline installation prior to rollout, a rigorous program of testing is conducted in a controlled environment.
- Support: On-site testing and system checkout ensures that your client's system is fully functional and ready for use.

Technology is rapidly advancing in the Audio Visual industry. Control Concepts, Inc. keeps your projects on the cutting edge by constant training, testing, and certification of our staff in all relevant disciplines. InfoComm, CEDIA, Crestron, AMX, and Extron are just a few of the industry affiliates we train with on a regular basis. Our programmers have the knowledge and experience to meet all of your project needs. All work is based on your requirements and follows an individually tailored design process.
